

S1

(BLU S1)

Quick Start Guide

FCC Regulations

- This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
- This device has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiated radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

Reorient or relocate the receiving antenna.

Increase the separation between the equipment and receiver.

Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

Consult the dealer or an experienced radio/TV technician for help.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

RF Exposure Information (SAR)

This phone is designed and manufactured not to exceed the emission limits for exposure to radio frequency (RF) energy set by the Federal Communications Commission of the United States.

During SAR testing, this device was set to transmit at its highest certified power level in all tested frequency bands, and placed in positions that simulate RF exposure in usage against the head with no separation, and near the body with the separation of 10 mm. Although the SAR is determined at the highest certified power level, the actual SAR level of the device while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output.

The exposure standard for wireless devices employing a unit of measurement is known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6W/kg.

This device is complied with SAR for general population /uncontrolled exposure limits in ANSI/IEEE C95.1-1992 and had been tested in accordance with the measurement methods and procedures specified in IEEE1528.

The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of www.fcc.gov/oet/ea/fccid after searching on FCC ID: YHLBLUS1.

For this device, the highest reported SAR value for usage against the head is 0.67 W/kg, for usage near the body is 1.02 W/kg.

While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirements.

SAR compliance for body-worn operation is based on a separation distance of 10 mm between the unit and the human body. Carry this device at least 10 mm away from your body to ensure RF exposure level compliant or lower to the reported level. To support body-worn operation, choose the belt clips or holsters, which do not contain metallic components, to maintain a separation of 10 mm between this device and your body.

RF exposure compliance with any body-worn accessory, which contains metal, was not tested and certified, and use such body-worn accessory should be avoided.

Important Safety Information

- Use a wireless hands-free system (headphone, headset) with a low power Bluetooth emitter.
- Make sure the cell phone has a low SAR.
- Keep your calls short or send a text message (SMS) instead. This advice applies especially to children, adolescents and pregnant women.
- Use cell-phone when the signal quality is good.
- People having active medical implants should preferably keep the cell phone at least 15 cm away from the implant.

Charging the Battery

Before using the phone, it is recommended to fully charge the battery first.

1. Connect the smaller end of the USB cable to the USB port of the device.
2. Connect the other end of the cable to the USB charger or other USB port with power source (for example, laptop).
3. Plug the AC adapter to a wall outlet to start charging.

Warning

- Charge only indoors and in dry environments.
- For safety, the overheat protection will be active during charging. If the system temperature reaches above the maximum level, the device will automatically stop charging. The device will only resume charging when normal operating temperature is reached.
- If there is no response after you press the power button or touch the panel, press and hold the 'power button and volume (+) key' for 10 seconds, phone will power off, If you hold the 'power button and volume (+) key' for 5 seconds more, it will restart.
- InFocus standard for water ingress criteria.
 - (1) Water ingress label become red color or contaminated.
 - (2) Water marks or corrossions on device PCB or components.
- Please make sure the temperature for adapter will not be higher than 50℃
- Do not store your phone in temperatures higher than 60℃
- The operating temperature for this device is from -10℃ to 50℃

Installing SIM Card and Memory Card

- 1 Put the thimble tool into the hole near SIM card tray, then push until card tray pop up, and then pull out the card with hand.

2. Put the SIM into the card slot on the one tray side, and put the Memory card into the card slot on the other tray side. Then push the tray into the phone card slot.

For the first time to start

Install the SIM card and charge the battery, then turn on the device.

For the first time the picture

On the front page, you can review the incoming calls, the messages received, the battery and the wire. Swipe left or right to read the application installed on the device.

Calling

1. Click the phone number on the keyboard.
2. Click to  clear the wrong number. Click and hold to remove all the Numbers.
3. Click to  make a phone call.
4. To end the call, please click  .

Answering calls

If you want to answer the call, please click  slide to the right.

If you want to turn down a call , please click  slide to the left.

Contact

Add the contact

1. Click to  .
2. Click to  can add the contact.
3. Select the location to store the contacts.
4. Enter contact information such as name, phone number, E-mail, etc.
5. Click to  save the contact.

Setting Wi-Fi

1. Click to .
2. In Settings, click wi-fi and turn it on.
3. Click the network to be online.

Note: the connection to the protected network will prompt for the password. Please enter the password, then click on the online.

Use the Bluetooth

1. Click to .
2. Select bluetooth, and then open.
3. A list of available devices is listed. For new devices, click here , click refresh again.
4. Click on the device that has been detected.
5. To start pairing, enter the matching code and then click ok.

Notes :

- The matching code of the device must be the same as that of other bluetooth matching devices.
 - On some devices, the click pairing can begin to match.
- 6.The matching bluetooth device name will be displayed.
