## Laboratories Introduction

SIEMIC, headquartered in the heart of Silicon Valley, with superior facilities in US and Asia, is one of the leading independent testing and certification facilities providing customers with one-stop shop services for Compliance Testing and Global Certifications.

In addition to testing and certification, SIEMIC provides initial design reviews and compliance management throughout a project. Our extensive experience with China, Asia Pacific, North America, European, and International compliance requirements, assures the fastest, most cost effective way to attain regulatory compliance for the global markets.

### Accreditations for Conformity Assessment

| Country/Region | Scope                              |
|----------------|------------------------------------|
| USA            | EMC, RF/Wireless, SAR, Telecom     |
| Canada         | EMC, RF/Wireless, SAR, Telecom     |
| Taiwan         | EMC, RF, Telecom, SAR, Safety      |
| Hong Kong      | RF/Wireless, SAR, Telecom          |
| Australia      | EMC, RF, Telecom, SAR, Safety      |
| Korea          | EMI, EMS, RF, SAR, Telecom, Safety |
| Japan          | EMI, RF/Wireless, SAR, Telecom     |
| Singapore      | EMC, RF, SAR, Telecom              |
| Europe         | EMC, RF, SAR, Telecom, Safety      |

| Manufacturer Add | 10814 NW 33rd St # 100 Doral, FL 33172 , USA |

## 3. Test site information

Test Lab A:

|                      |  |
|----------------------|--|
| Lab performing tests | SIEMIC (Shenzhen-China) LABORATORIES   |
| Lab Address          | Zone A, Floor 1, Building 2 Wan Ye Long Technology Park<br>South Side of Zhoushi Road, Bao' an District, Shenzhen, Guangdong China<br>518108 |
| FCC Test Site No.    | 535293   |
| IC Test Site No.     | 4842E-1  |
| Test Software        | Radiated Emission Program-To Shenzhen v2.0   |

Test Lab B:

|                      |   |
|----------------------|---|
| Lab performing tests | SIEMIC (Nanjing-China) Laboratories   |
| Lab Address          | 2-1 Longcang Avenue Yuhua Economic and<br>Technology Development Park, Nanjing, China |
| FCC Test Site No.    | 694825  |
| IC Test Site No.     | 4842B-1   |
| Test Software        | EZ_EMС(ver.lcp-03A1)  |

Note: We just perform Radiated Spurious Emission above 18GHz in the test Lab. B.

## 4. Equipment under Test (EUT) Information

|                               |   |
|-------------------------------|---|
| Description of EUT:           | Feature Phone   |
| Main Model:                   | Z5  |
| Serial Model:                 | N/A   |
| Date EUT received:            | December 27, 2017   |
| Test Date(s):                 | December 28, 2017 to January 17, 2018   |
| Equipment Category :          | DSS   |
| Antenna Gain:                 | GSM850: -0.5dBi<br>PCS1900: -0.8dBi<br>Bluetooth: -0.4dBi   |
| Antenna Type:                 | GSM: PIFA antenna<br>BT: monopole antenna   |
| Type of Modulation:           | GSM / GPRS: GMSK<br>Bluetooth: GFSK, π /4DQPSK, 8DPSK   |
| RF Operating Frequency (ies): | GSM850 TX: 824.2 ~ 848.8 MHz; RX: 869.2 ~ 893.8 MHz<br>PCS1900 TX: 1850.2 ~ 1909.8 MHz; RX: 1930.2 ~ 1989.8 MHz<br>Bluetooth: 2402-2480 MHz |
| Max. Output Power:            | 9.136dBm  |
| Number of Channels:           | GSM 850: 124CH<br>PCS1900: 299CH<br>Bluetooth: 79CH   |
| Port:                         | USB Port, Earphone Port   |

|             |                 |

| Test Report | 17071472-FCC-R2 |
| Page        | 7 of 66         |

Adapter:

Model: US-SL-0550

Input: AC 100-240V~50/60Hz,0.15A

Input Power: Output: DC 5.0V-550mA

Battery

Model: N5C600T

Spec: 3.7V, 600mAh 2.22Wh

Trade Name : BLU

FCC ID: YHLBLUZ5

## 5. Test Summary

The product was tested in accordance with the following specifications.

All testing has been performed according to below product classification:

| FCC Rules                    | Description of Test                 | Result     |
|------------------------------|-------------------------------------|------------|
| §15.203                      | Antenna Requirement                 | Compliance |
| §15.247(a)(1)                | Channel Separation                  | Compliance |
| §15.247(a)(1)                | 20 dB Bandwidth                     | Compliance |
| §15.247(b)(1)                | Peak Output Power                   | Compliance |
| §15.247(a)(1)(iii)           | Number of Hopping Channel           | Compliance |
| §15.247(a)(1)(iii)           | Time of Occupancy (Dwell Time)      | Compliance |
| §15.247(d)                   | Band Edge& Restricted Band          | Compliance |
| §15.207(a)                   | AC Line Conducted Emissions         | Compliance |
| §15.205, §15.209, §15.247(d) | Radiated Emissions& Restricted Band | Compliance |

### Measurement Uncertainty

| Emissions  |   |               |
|--|---|---------------|
| Test Item  | Description   | Uncertainty   |
| Band Edge& Restricted Band and Radiated Emissions& Restricted Band | Confidence level of approximately 95% (in the case where distributions are normal), with a coverage factor of 2 (for EUTs < 0.5m X 0.5m X 0.5m) | +5.6dB/-4.5dB |
| -  | -   | -             |

## **6. Measurements, Examination And Derived Results**

### **6.1 Antenna Requirement**

#### **Applicable Standard**

According to § 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the user of a standard antenna jack or electrical connector is prohibited. The structure and application of the EUT were analyzed to determine compliance with section §15.203 of the rules. §15.203 state that the subject device must meet the following criteria:

- a. Antenna must be permanently attached to the unit.
- b. Antenna must use a unique type of connector to attach to the EUT.

Unit must be professionally installed, and installer shall be responsible for verifying that the correct antenna is employed with the unit.

And according to FCC 47 CFR section 15.247 (b), if the transmitting antennas of directional gain greater than 6dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

#### **Antenna Connector Construction**

The EUT has 2 antennas:

A permanently attached monopole antenna for Bluetooth, the gain is -0.4dBi for Bluetooth.

A permanently attached PIFA antenna for GSM/PCS, the gain is -0.5dBi for GSM850, -0.8dBi for PCS1900.

**The antenna meets up with the ANTENNA REQUIREMENT.**

**Result:** Compliance.

## 6.2 Channel Separation

|                      |                  |
|----------------------|------------------|
| Temperature          | 25°C             |
| Relative Humidity    | 58%              |
| Atmospheric Pressure | 1016mbar         |
| Test date :          | January 16, 2018 |
| Tested By :          | Aarron Liang     |

### Requirement(s):

| Spec           | Item | Requirement  | Applicable                          |
|----------------|------|--|-------------------------------------|
| § 15.247(a)(1) | a)   | Channel Separation < 20dB BW and 20dB BW < 25KHz ; Channel Separation Limit=25KHz<br>Chanel Separation < 20dB BW and 20dB BW > 25kHz ; Channel Separation Limit=2/3 20dB BW  | <input checked="" type="checkbox"/> |
| Test Setup     |      |  <p style="text-align: center;">Spectrum Analyzer    EUT</p>   |                                     |
| Test Procedure |      | <p>The test follows FCC Public Notice DA 00-705 Measurement Guidelines.</p> <p><u>Use the following spectrum analyzer settings:</u></p> <ul style="list-style-type: none"> <li>- The EUT must have its hopping function enabled</li> <li>- Span = wide enough to capture the peaks of two adjacent channels</li> <li>- Resolution (or IF) Bandwidth (RBW) <math>\geq</math> 1% of the span</li> <li>- Video (or Average) Bandwidth (VBW) <math>\geq</math> RBW</li> <li>- Sweep = auto</li> <li>- Detector function = peak</li> <li>- Trace = max hold</li> <li>- Allow the trace to stabilize. Use the marker-delta function to determine the separation between the peaks of the adjacent channels. The limit is specified in one of the subparagraphs of this Section. Submit this plot.</li> </ul> |                                     |

|           |   |                               |

| Test Setup                                  |                             |  <p>The diagram illustrates the test setup for radiated emissions. An EUT (Equipment Under Test) is placed on a stand 0.8m above a ground plane. A Loop Antenna is positioned 3 meters away from the EUT. An RF Test Receiver is connected to the Loop Antenna to measure the signal.</p>   |                       |                             |             |             |             |              |            |    |         |     |          |     |         |     |           |     |                                     |

|           |  |                               |
|-----------|--|-------------------------------|
| Procedure | <ol style="list-style-type: none"> <li>1. The EUT was switched on and allowed to warm up to its normal operating condition.</li> <li>2. The test was carried out at the selected frequency points obtained from the EUT characterization. Maximization of the emissions, was carried out by rotating the EUT, changing the antenna polarization, and adjusting the antenna height in the following manner: <ul style="list-style-type: none"> <li>a. Vertical or horizontal polarization (whichever gave the higher emission level over a full rotation of the EUT) was chosen.</li> <li>b. The EUT was then rotated to the direction that gave the maximum emission.</li> <li>c. Finally, the antenna height was adjusted to the height that gave the maximum emission.</li> </ul> </li> <li>3. The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 120 kHz for Quasiy Peak detection at frequency below 1GHz.</li> <li>4. The resolution bandwidth of test receiver/spectrum analyzer is 1MHz and video bandwidth is 3MHz with Peak detection for Peak measurement at frequency above 1GHz.<br/>The resolution bandwidth of test receiver/spectrum analyzer is 1MHz and the video bandwidth is 10Hz with Peak detection for Average Measurement as below at frequency above 1GHz.</li> <li>5. Steps 2 and 3 were repeated for the next frequency point, until all selected frequency points were measured.</li> </ol> |                               |

| --             | --                 | --               | --                  | --                 | --                   | >20            |
| --             | --                 | --               | --                  | --                 | --                   | >20            |

Note:

The amplitude of spurious emissions which are attenuated by more than 20dB below the permissible value has no need to be reported.

Distance extrapolation factor =  $40 \log (\text{specific distance}/\text{test distance})$ (dB);

Limit line = specific limits(dBuv) + distance extrapolation factor.

| 17787              | 42.59                           | PK                  | H                 | 43.44                    | 19.58                 | 45.27                        | 60.34                           | 74                      | -13.66         |

**Note:**

1, The testing has been conformed to  $10 \times 2480\text{MHz} = 24,800\text{MHz}$

2, All other emissions more than 30 dB below the limit

3, X-Axis, Y-Axis and Z-Axis were investigated. The results above show only the worst case.

4, The radiated spurious test above 18GHz is subcontracted to SIEMIC (Nanjing-China) Laboratories. and found 30dB below the limit at least.
