## **5.9 FREQUENCY STABILITY**

Test Requirement: FCC 47 CFR Part 2.1055 & FCC 47 CFR Part 22.355 & FCC 47 CFR Part 24.235

**Test Method:** ANSI/TIA-603-E-2016 & KDB 971168 D01v03r01

Limits: The carrier frequency shall not depart from the reference frequency in excess of ±2.5

ppm for mobile stations.

**Test Setup:** Refer to section 4.2.2 for details.

**Test Procedures:** 

1) Use CMW 500 or CMU 200 with Frequency Error measurement capability.

a) Temp. =  $-30^{\circ}$  to +  $50^{\circ}$ C

b) Voltage = low voltage, 3.4 Vdc, Normal, 3.85 Vdc and High voltage, 4.35 Vdc.

2) Frequency Stability vs Temperature:

The EUT is place inside a temperature chamber. The temperature is set to 20°C and allowed to stabilize. After sufficient soak time, the transmitting frequency error is measured. The temperature is increased by 10 degrees, allowed to stabilize and soak, and then the measurement is repeated. This is repeated until +50°C is reached.

3) Frequency Stability vs Voltage:

The peak frequency error is recorded (worst-case).

**Equipment Used:** Refer to section 3 for details.

Test Result: Pass
